

# DISSTON Monarch Saw Set

Specially adapted for Hand Saws, Cross-Cut Saws, Circular Saws,  
and all small saws.

## TO OPERATE

First adjust the anvil "E" so that the bevel most suitable for the size tooth to be set is brought into position; place the Saw Set on the saw so that the guide "B" rests on the teeth; adjust this guide for the depth of set to be given by use of set screw "A". Use care not to go too deeply into the body of the tooth, as all of the set should be in the point itself. The top of plunger "D" should be in line with the top of the tooth to be set. Next adjust the setscrew "C" for amount of set required, taking care not to put on any more set than is absolutely necessary. If these instructions as to adjustment are carried out, the results will be entirely satisfactory to the operator.

The Monarch Saw Set is adapted for setting saws three quarter inch and wider. Made in two sizes: No. 2, No. 12. No. 2, the smallest size is suitable for Hand Saws, Back Saws, etc. 10 points to the inch and coarser, and No. 12 large size, for saws 14 gauge and thinner. Each size is Black Finish.
